

No More Pollution! Protect Our Health & Air!

STOP THE “HECA” COAL & FERTILIZER PLANT

COMMUNITY CLEAN AIR PROTEST

SATURDAY, APRIL 26, 2014 – 11 am

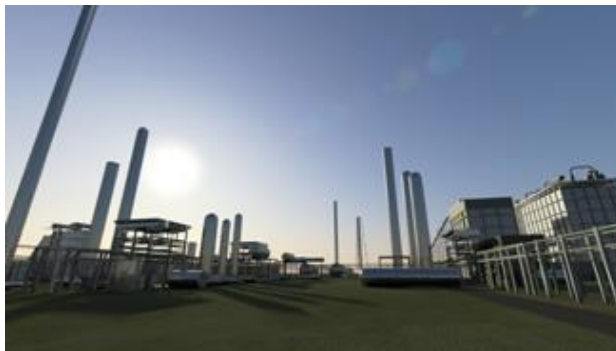

**In front of Hydrogen Energy California’s Office
189 E. Front Street, Buttonwillow**

SCS Energy/Hydrogen Energy California (HECA) wants to build a **huge new polluting facility in Kern County** between Tupman and Buttonwillow. The plant would use coal and petcoke to produce hydrogen for generating electricity and manufacturing fertilizer.

HECA would **release toxic contaminants, threaten groundwater, contribute to climate change**, and make the Valley’s terrible air quality even worse.

HECA would gasify the coal and petcoke, **emitting dangerous pollutants into the air.**

HECA would transport coal from New Mexico all the way to Tupman. Trains plus hundreds of trucks would carry coal, petcoke, fertilizer and waste products through Kern County communities every day.

The April 26th community protest is sponsored by Concerned Buttonwillow Residents, Farmers Against HECA, Accion Verde/Greenaction for Health and Environmental Justice, Association of Irrigated Residents, Sierra Club, Central California Environmental Justice Network
