

Let's tell our government officials:

Stop Dumping Toxic Waste in Kettleman City and Buttonwillow!

Did you know:

- Kettleman City & Buttonwillow have the only two hazardous waste landfills in the entire State of California
- Dangerous toxic waste is sent to these landfills from near and far, including chemicals that can cause cancer and other serious illnesses
- Trucks that carry the toxic waste emit harmful pollution into the air
- Both toxic waste landfills are being allowed to operate on permits that expired years ago
- The government approved the permits for these toxic waste dumps using racially discriminatory processes including police intimidation
- Kettleman City and Buttonwillow residents have a long history of fighting to protect their communities from toxic pollution
