

Spring 2024 *Frontlines of Environmental Justice*

Greenaction & Residents Demand Full Cleanup of the Hunters Point Shipyard Superfund Site!

We demand a 100 percent cleanup of toxic and radioactive waste. As climate change causes sea levels and groundwater to rise, plans to leave contamination near the San Francisco Bay shoreline threaten the health of residents and the Bay. The campaign is heating up, let's win!

Defeat Prologis' SF Gateway Project!

We are leading the fight to stop the proposed San Francisco Gateway Project, a massive freight and manufacturing operation that would pollute the air of Bayview Hunters Point, where residents already suffer from pollution from many dirty industries and contaminated sites.

Solidarity with White Mesa Ute Community and Ute Mountain Ute Tribe to Stop Radioactive Dumping on Sacred Lands in southern Utah

We continue our years of work with the Ute People to stop Energy Fuels' uranium mill from continuing to pollute the environment and destroy Indigenous sacred sites – and from becoming an international radioactive waste dump.

VICTORY! No Oro Cruz Cyanide Leach Gold Mine on Sacred Quechan Land!

We are honored to work with the Quechan Tribe, Elders, and many allies in the campaign to defeat the proposed Oro Cruz cyanide leach gold mine in Imperial County, California. The mine would desecrate culturally significant Indigenous sites and harm water quality and sensitive ecosystems. Two years ago we helped the Quechan protect sacred Indian Pass from a similar gold mine proposal. In a big victory on March 19, the Board of Supervisors granted the appeal filed by Quechan, Greenaction and many allies – and they rejected the company's exploratory drilling plan.

Stop Dumping Toxic Waste in Kettleman City & Buttonwillow – and Stop the Proposed Carbon Sequestration Facility near Buttonwillow!

We continue our decades of work with residents of the farmworker towns of Kettleman City and Buttonwillow where the State of California's two hazardous waste landfills are illegally allowed to keep dumping toxic waste at hazardous waste landfills operating on expired permits that were issued long ago with racially discriminatory permit processes including police intimidation of residents.

We are also working with Buttonwillow residents and allies to defeat a proposed carbon sequestration facility that would pollute the environment and is a false "solution" to the climate crisis.

Health and Justice for Laytonville, California!

We continue working with residents including the Cahto Tribe whose land is contaminated with toxic pollution from old county landfills that were never properly capped and where toxic waste was illegally burned and dumped. A health survey conducted by Greenaction and residents confirmed our worst fears: extremely high rates of cancer and death in the neighborhoods adjacent to the old landfills, including on the Cahto Tribe Rancheria.

Stop the Lithium Mine at Thacker Pass, Nevada

Greenaction stands with the Paiute and Shoshone people resisting destructive and polluting lithium mining operations that were approved by the government on a sacred site that was the location of a massacre of Indigenous Peoples. Greenaction is donating a high-quality Particulate Matter air monitor to the grassroots indigenous group People of Red Mountain so they can monitor air quality that is being threatened by the mining operations. “Green Energy” should not include destructive and polluting mining practices.

PLEASE SUPPORT GREENACTION!

Help Greenaction have the funds and capacity to keep helping communities and Native Nations win victories for healthy and safe environments and environmental and climate justice.

Your support helps make our work possible and successful.

Spread the word, tell your friends, family, co-workers about Greenaction!

Stop H Cycle’s “Incinerators in Disguise” proposed across California and Utah

Greenaction is on the frontlines challenging industry and government attempts to disguise a new generation of combustion/incinerator technologies as “green” renewable energy. A company called H Cycle is proposing “gasification” facilities in many communities, and the first battle is raging in Pittsburg, California, a low-income/working class people of color community. Other areas apparently being targeted by H Cycle are all across California as well as the Salt Lake City, Utah area.

H Cycle Beware! We are watching you and will challenge your phony “renewable energy” projects.

San Francisco Bay Climate Justice Campaign Demands Cleanup of Shoreline Contamination Sites as Sea Levels & Groundwater Rise

From Treasure Island and the Hunters Point Shipyard Superfund Site, to the Zeneca site in Richmond, to Marin City, and dozens of other sites around San Francisco Bay, we are challenging the government to properly clean up toxic and radioactive waste sites along the shoreline.

Our work has succeeded in getting government agencies to reconsider plans to leave large amounts of contamination capped, as rising sea levels and groundwater threaten the San Francisco Bay and neighborhoods already harmed by pollution. Now we are holding regional, state, and federal government agencies to comply with their new policies and finally require full cleanup of these toxic and radioactive sites.

Youth and Adult Environmental Justice Leadership Academy Programs Continue!

Our Leadership Academies at the White Mesa Ute Community, Kettleman City, and Bayview Hunters Point continue to educate and empower residents to be effective leaders in the fight for environmental justice. We are working to raise the funds to expand our Youth and Adult Leadership Academy programs to many other frontline urban, rural, and Indigenous communities across the western U.S.
